# Practical Research Tips for Teachers ...

## Developing research methods ...

Guided by research methods, this training will show teachers how to engage with academic research in practical ways, showing how to filter, summarise and translate theory into practice.

## Using research tools ...

Over the past 15 years, I've learned how to access complicated academic research into bite-size chunks for teachers, translating theory using practical tools that can be implemented immediately.

Bringing together everything I have learned from my school experiences, research, writing, instructional design and academic studies, this training is designed to help schools use and implement these strategies.

Topics include lesson observation, appraisal, research methods and how to design research questions for professional development or formal qualifications.

## Delivery:

1. Audience: All teachers
2. Ideal Delivery: ½ day (3hrs)
3. Includes priming CPD, retrieval CPD, book + resources
